# NI 6122/6123 Specifications

This document lists the I/O terminal summary and specifications for the NI 6122/6123.

For the most current edition of this document, refer to [ni.com/manuals](http://ni.com/manuals). Refer to the *DAQ Quick Start Guide* for more information about accessing documents on the NI-DAQ CD.

**Note** With NI-DAQmx, National Instruments has revised its terminal names so they are easier to understand and more consistent among NI hardware and software products. The revised terminal names used in this document are usually similar to the names they replace. For a complete list of Traditional NI-DAQ terminal names and their NI-DAQmx equivalents, refer to the *Terminal Name Equivalents* table in the *S Series Help*.

## Absolute Accuracy

Nominal Range at Full Scale (V)	Residual Gain Error (ppm of Reading)	Gain Tempco (ppm/°C)	Reference Tempco	Residual Offset Error (ppm of Range)	Offset Tempco (ppm of Range/°C)	INL Error (ppm of Range)	Random Noise, $\sigma$ (µVRms)	Absolute Accuracy at Full Scale <sup>1</sup> (µV)	Sensitivity <sup>2</sup> (µV)
±10	123	25	5	40	186	62	330	4960	132.0
±5	123	25	5	48	192	62	166	2550	66.4
±2.5	128	25	5	52	229	62	105	1400	42.0
±1.25	128	25	5	58	251	62	60	740	24.0

AbsoluteAccuracy = Reading · (GainError) + Range · (OffsetError) + NoiseUncertainty

GainError = ResidualAIGainError + GainTempco · (TempChangeFromLastInternalCal) + ReferenceTempco · (TempChangeFromLastExternalCal)

OffsetError = ResidualAIOffsetError + OffsetTempco · (TempChangeFromLastInternalCal) + INL\_Error

NoiseUncertainty =  $\frac{\text{RandomNoise} \cdot 3}{\sqrt{100}}$  For a coverage factor of 3  $\sigma$  and averaging 100 points.

<sup>1</sup> Absolute accuracy at full scale on the analog input channels is determined using the following assumptions:

TempChangeFromLastExternalCal = 10 °C

TempChangeFromLastInternalCal = 1 °C

number\_of\_readings = 100

CoverageFactor = 3  $\sigma$

For example, on the 10 V range, the absolute accuracy at full scale is as follows:

$$\text{GainError} = 123 \text{ ppm} + 25 \text{ ppm} \cdot 1 + 5 \text{ ppm} \cdot 10 \quad \text{GainError} = 198 \text{ ppm}$$

$$\text{OffsetError} = 40 \text{ ppm} + 186 \text{ ppm} \cdot 1 + 62 \text{ ppm} \quad \text{OffsetError} = 288 \text{ ppm}$$

$$\text{NoiseUncertainty} = \frac{330 \mu\text{V} \cdot 3}{\sqrt{100}} \quad \text{NoiseUncertainty} = 99 \mu\text{V}$$

$$\text{AbsoluteAccuracy} = 10 \text{ V} \cdot (\text{GainError}) + 10 \text{ V} \cdot (\text{OffsetError}) + \text{NoiseUncertainty} \quad \text{AbsoluteAccuracy} = 4960 \mu\text{V}$$

<sup>2</sup> Sensitivity is the smallest voltage change that can be detected. It is a function of noise.
