

COMPREHENSIVE SERVICES

We offer competitive repair and calibration services, as well as easily accessible documentation and free downloadable resources.

SELL YOUR SURPLUS

We buy new, used, decommissioned, and surplus parts from every NI series. We work out the best solution to suit your individual needs.

 Sell For Cash  Get Credit  Receive a Trade-In Deal

OBSOLETE NI HARDWARE IN STOCK & READY TO SHIP

We stock **New, New Surplus, Refurbished, and Reconditioned** NI Hardware.

Bridging the gap between the manufacturer and your legacy test system.

PXI-1428

Getting Started with the NI PXI/PCI-1428

The NI PXI/PCI-1428 (NI 1428) is an image acquisition device that supports a diverse range of Camera Link-compatible cameras. This document describes how to install and configure the necessary hardware and software components to begin using the NI 1428.

What You Need to Get Started

You need the following items to set up and use the NI 1428:

- NI 1428 image acquisition device
- Base configuration Camera Link-compatible camera
- MDR 26-pin Camera Link cable
- PCI, PXI, or Compact PCI computer running Microsoft Windows Vista/XP/2000 with at least one available slot

Note Visit ni.com/info and enter `rdvisionvista` for more information about National Instruments image acquisition device compatibility with Windows Vista.

- NI Vision Acquisition Software 8.2.0 or later, which includes the NI-IMAQ driver software
- Optional software for developing applications:
 - NI Vision Builder for Automated Inspection
 - NI Vision Development Module
 - LabVIEW
 - LabWindows™/CVI™
 - Microsoft Visual Basic

Optional Equipment

National Instruments offers a variety of products for use with the NI 1428, including the following:

- NI D6804 breakout cable used for external triggering only. This cable provides BNC connectivity to the four external trigger lines on the 68-pin VHDCI connector (part number 187804-01).
- NI D6826 breakout cable used for medium configuration and external triggering. This cable breaks the VHDCI connector into a 25-pin D-SUB for triggering and an MDR 26-pin Camera Link cable for medium configuration connectivity (part number 190936-01).

Refer to the National Instruments catalog, visit ni.com, or call the National Instruments office nearest you for more specific information about these products.

Related Documentation

The following documents contain additional information that you may find helpful:

- *NI PXI/PCI-1428 User Manual*—Contains information about programming options, hardware functionality, and signal connections.
- *NI Vision Acquisition Software Release Notes*—Contains information about new functionality, minimum system requirements, and installation instructions for the NI-IMAQ driver software.
- *Measurement & Automation Explorer Help for NI-IMAQ*—Describes how to configure the NI-IMAQ driver software, NI image acquisition devices, and cameras using Measurement & Automation Explorer (MAX).
- *NI-IMAQ Help*—Contains fundamental programming concepts for the NI-IMAQ driver software and terminology for using NI image acquisition devices.

Safety Information

Caution The following paragraphs contain important safety information you *must* follow when installing and operating the device.

Do *not* operate the device in a manner not specified in the documentation. Misuse of the device may result in a hazard and may compromise the safety protection built into the device. If the device is damaged, turn it off and do *not* use it until service-trained personnel can check its safety. If necessary, return the device to National Instruments for repair.

Keep away from live circuits. Do *not* remove equipment covers or shields unless you are trained to do so. If signal wires are connected to the device, hazardous voltages can exist even when the equipment is turned off. To avoid a shock hazard, do *not* perform procedures involving cover or shield removal unless you are qualified to do so. Disconnect all field power prior to removing covers or shields.

If the device is rated for use with hazardous voltages ($>30 V_{\text{rms}}$, $42.4 V_{\text{pk}}$, or $60 V_{\text{dc}}$), it may require a safety earth-ground connection wire. Refer to the device specifications for maximum voltage ratings.

Because of the danger of introducing additional hazards, do *not* install unauthorized parts or modify the device. Use the device only with the chassis, modules, accessories, and cables specified in the installation instructions. All covers and filler panels *must* be installed while operating the device.

Do *not* operate the device in an explosive atmosphere or where flammable gases or fumes may be present. Operate the device only at or below the pollution degree stated in the specifications. Pollution consists of any foreign matter—solid, liquid, or gas—that may reduce dielectric strength or surface resistivity. The following is a description of pollution degrees.

- Pollution Degree 1—No pollution or only dry, nonconductive pollution occurs. The pollution has no effect.
- Pollution Degree 2—Normally only nonconductive pollution occurs. Occasionally, nonconductive pollution becomes conductive because of condensation.
- Pollution Degree 3—Conductive pollution or dry, nonconductive pollution occurs. Nonconductive pollution becomes conductive because of condensation.

Clean the device and accessories by brushing off light dust with a soft, nonmetallic brush. Remove other contaminants with a stiff, nonmetallic brush. The unit *must* be completely dry and free from contaminants before returning it to service.

You *must* insulate signal connections for the maximum voltage for which the device is rated. Do *not* exceed the maximum ratings for the device. Remove power from signal lines before connection to or disconnection from the device.

Caution National Instruments measurement products may be classified as either Measurement Category I or II. Operate products at or below the Measurement Category level specified in the hardware specifications.

Measurement Category¹: Measurement circuits are subjected to working voltages² and transient stresses (overvoltage) from the circuit to which they are connected during measurement or test. Measurement Category establishes standardized impulse withstand voltage levels that commonly occur in electrical distribution systems. The following is a description of Measurement (Installation³) Categories:

- Measurement Category I is for measurements performed on circuits *not* directly connected to the electrical distribution system referred to as MAINS⁴ voltage. This category is for measurements of voltages from specially protected secondary circuits. Such voltage measurements include signal levels, special equipment, limited-energy parts of equipment, circuits powered by regulated low-voltage sources, and electronics.
- Measurement Category II is for measurements performed on circuits directly connected to the electrical distribution system. This category refers to local-level electrical distribution, such as that provided by a standard wall outlet (e.g., 115 V for U.S. or 230 V for Europe). Examples of Measurement Category II are measurements performed on household appliances, portable tools, and similar products.
- Measurement Category III is for measurements performed in the building installation at the distribution level. This category refers to measurements on hard-wired equipment such as equipment in fixed installations, distribution boards, and circuit breakers. Other examples are wiring, including cables, bus-bars, junction boxes, switches, socket-outlets in the fixed installation, and stationary motors with permanent connections to fixed installations.

Unpacking

The NI 1428 ships in an antistatic package to prevent electrostatic discharge from damaging device components. To avoid such damage in handling the device, take the following precautions:

1. Ground yourself using a grounding strap or by holding a grounded object, such as the computer chassis.
2. Touch the antistatic package to a metal part of the computer chassis before removing the device from the package.

Caution *Never* touch the exposed pins of connectors.

Remove the device from the package and inspect it for loose components or any other signs of damage. Notify National Instruments if the device appears damaged in any way. Do *not* install a damaged device in the computer.

Store the NI 1428 in the antistatic package when not in use.

¹ Measurement Categories as defined in electrical safety standard IEC 61010-1.

² Working voltage is the highest rms value of an AC or DC voltage that can occur across any particular insulation.

³ Measurement Category is also referred to as Installation Category.

⁴ MAINS is defined as the (hazardous live) electrical supply system to which equipment is designed to be connected for the purpose of powering the equipment. Suitably rated measuring circuits may be connected to the MAINS for measuring purposes.

Installation

The following instructions are for general installation. Refer to the documentation provided by your computer manufacturer for specific instructions and warnings. Refer to the [Specifications](#) section for typical power requirements for the NI 1428.

NI PXI-1428

1. Install the NI Vision Acquisition Software before installing the NI PXI-1428. Refer to the *NI Vision Acquisition Software Release Notes* for specific installation instructions.
2. Power off and unplug the PXI or Compact PCI chassis.

Caution To protect yourself and the computer from electrical hazards, the computer *must* remain unplugged until the installation is complete.

3. Choose an unused PXI or CompactPCI 5 V slot that supports bus arbitration or bus-master cards. PXI-compliant chassis must have bus arbitration for all slots.
4. Remove the filler panel for the slot you have chosen.
5. Touch a metal part of the chassis to discharge any static electricity that might be on your clothes or body. Static electricity can damage the device.
6. Insert the NI PXI-1428 in the selected 5 V slot. Use the injector/ejector handle to fully inject the device into place.
7. Secure the front panel of the NI PXI-1428 to the front panel mounting rails of the PXI or CompactPCI chassis.
8. Connect the MDR 26-pin Camera Link cable to the camera. Refer to your camera manufacturer documentation for specific instructions about how to connect the cable to your camera.
9. Connect the Camera Link cable to the Camera Link connector on the NI PXI-1428 front panel.
10. Plug in and power on the PXI or CompactPCI chassis.

The NI PXI-1428 is now installed and the camera is connected.

NI PCI-1428

1. Install the NI Vision Acquisition Software before installing the NI PCI-1428. Refer to the *NI Vision Acquisition Software Release Notes* for specific installation instructions.
2. Power off and unplug the computer.

Caution To protect yourself and the computer from electrical hazards, the computer *must* remain unplugged until the installation is complete.

3. Remove the computer cover to expose the expansion slots.
4. Touch a metal part of the computer to discharge any static electricity that might be on your clothes or body. Static electricity can damage the device.
5. Choose an unused PCI slot, and remove the corresponding expansion slot cover on the back panel of the computer.
6. Remove your device from the antistatic package and gently rock the device into the slot. The connection may be tight, but do *not* force the device into place.

Note Check that the bracket of your device aligns with the hole in the back panel rail of the computer chassis.

7. Secure the device mounting bracket to the back panel rail of the computer.

8. Replace the computer cover.
9. Connect the MDR 26-pin Camera Link cable to the camera. Refer to your camera manufacturer documentation for specific instructions about how to connect the cable to your camera.
10. Connect the Camera Link cable to the Camera Link connector on the NI PCI-1428 front panel.
11. Plug in and power on the computer.

The NI PCI-1428 is now installed and the camera is connected.

Configuring the NI 1428

After you have installed the NI 1428 and powered on the computer, the computer will recognize the device and assign resources to it. Use Measurement & Automation Explorer (MAX), the National Instruments configuration utility, to configure the NI 1428 for acquisition. Refer to the *Measurement & Automation Explorer Help for NI-IMAQ* for additional information about configuring the NI 1428.

Note Before configuring the device in MAX, ensure that you installed the NI-IMAQ driver software.

Interfacing with the NI 1428

The Camera Link standard defines physical connections between image acquisition devices and Camera Link cameras, and it allows for flexibility of image format and data transfer protocols. The camera manufacturer defines image parameters, such as image resolution and the number of bits per pixel. Camera control parameters, such as frame-on-demand and exposure control signals, are also defined by the camera manufacturer.

These variable parameters are defined on a per-camera basis in a camera file (`camera_model.icd`) supplied by National Instruments. The NI-IMAQ driver software uses the information in this camera file to program the NI 1428 to acquire images from a specific camera. Without this camera file, the driver does not have the information necessary to configure the NI 1428 to recognize the image format of the particular camera you are using. Refer to MAX for information about valid camera attributes for your camera and image acquisition device.

Many camera files are installed when you install NI-IMAQ, and many more are available for download from the National Instruments Industrial Camera Advisor at ni.com/camera. You can also create your own camera files using the NI Camera File Generator. This utility can be downloaded from ni.com/vision. When installing new camera files, save them to the `<NI-IMAQ>\Data` directory.

Contact National Instruments technical support to request camera files not available in the Camera Advisor. Refer to the *Where to Go for Support* section for information about National Instruments technical support.

MAX provides a simple interface for associating a camera file with the NI 1428. Use the following guidelines to access the camera file in MAX:

1. Launch MAX, and expand the **Devices and Interfaces** branch of the configuration tree.
2. Expand the **NI 1428** branch.
3. Right-click **Channel 0** and select **Camera**.
4. Select your camera from the menu. If your camera is not in the menu, verify that the camera file is installed in the `NI-IMAQ\Data` directory.

Note If you lose communication with the camera during an acquisition for any reason, such as unplugging a cable or powering off your camera, you must restart the acquisition to allow the device to relock the incoming timing signals.

Specifications

The following specifications apply to the NI 1428 image acquisition device. These specifications are typical at 25 °C unless otherwise specified.

Trigger Characteristics

Number of external trigger I/O lines.....	4
Trigger input	
Voltage range	0 V to 5 V (TTL)
Input high voltage	2.0 V
Input low voltage	0.8 V
Polarity	Programmable, active high or active low
Trigger output	
Voltage range	0 V to 5 V (TTL)
Output high voltage.....	2.4 V at 15 mA source
Output low voltage.....	0.55 V at 10 mA sink
Polarity	Programmable, active high or active low
Power-on state.....	Input (high-impedance) 10 K Ω pull-up to 5 V
Pixel clock.....	Camera Link compatible
Enables.....	Camera Link compatible
Control signal.....	Camera Link compatible
Video data	Camera Link compatible

Clocks

Pixel clock frequency range.....	20 MHz to 50 MHz
----------------------------------	------------------

Note Camera Link cameras must transmit at a minimum of 20 MHz.¹

PCI Interface

Theoretical max PCI bandwidth	133 MB/s
-------------------------------------	----------

Physical Characteristics

Dimensions

NI PXI-1428	10 cm × 16 cm (3.9 in. × 6.3 in.)
NI PCI-1428.....	10.7 cm × 17.5 cm (4.2 in. × 6.9 in.)

Weight

NI PXI-1428	0.172 kg (0.38 lb)
NI PCI-1428.....	0.127 kg (0.28 lb)

¹ This value corresponds to the post-serialization Camera Link cable transmission rate of 140 MHz to 350 MHz.

Power Consumption

NI PXI-1428	+5 V (250 mA)
	+3.3 V (1.2 A)
NI PCI-1428.....	+5 V (1.5 A)
	+12 V (24 mA)
	-12 V (20 mA)

Environment

The NI 1428 device is intended for indoor use only.

Operating temperature0 °C to 55 °C

Storage temperature-20 °C to 70 °C

Pollution Degree2

Relative humidity5% to 90%, noncondensing

Approved at altitudes up to 2,000 m.

Safety

This product is designed to meet the requirements of the following standards of safety for electrical equipment for measurement, control, and laboratory use:

- IEC 61010-1, EN 61010-1
- UL 61010-1, CSA 61010-1

Note For UL and other safety certifications, refer to the product label or visit ni.com/certification, search by model number or product line, and click the appropriate link in the Certification column.

Electromagnetic Compatibility

This product is designed to meet the requirements of the following standards of EMC for electrical equipment for measurement, control, and laboratory use:

- EN 61326 EMC requirements; Minimum Immunity
- EN 55011 Emissions; Group 1, Class A
- CE, C-Tick, ICES, and FCC Part 15 Emissions; Class A

Note For EMC compliance, operate this device to product documentation.

CE Compliance

This product meets the essential requirements of applicable European Directives, as amended for CE marking, as follows:

- 73/23/EEC; Low-Voltage Directive (safety)
- 89/336/EEC; Electromagnetic Compatibility Directive (EMC)

Note Refer to the Declaration of Conformity (DoC) for this product for any additional regulatory compliance information. To obtain the DoC for this product, visit ni.com/certification, search by model number or product line, and click the appropriate link in the Certification column.

Waste Electrical and Electronic Equipment (WEEE)

EU Customers At the end of their life cycle, all products *must* be sent to a WEEE recycling center. For more information about WEEE recycling centers and National Instruments WEEE initiatives, visit ni.com/environment/weee.htm.

Where to Go for Support

The National Instruments Web site is your complete resource for technical support. At ni.com/support you have access to everything from troubleshooting and application development self-help resources to email and phone assistance from NI Application Engineers.

A Declaration of Conformity (DoC) is our claim of compliance with the Council of the European Communities using the manufacturer's declaration of conformity. This system affords the user protection for electronic compatibility (EMC) and product safety. You can obtain the DoC for your product by visiting ni.com/certification. If your product supports calibration, you can obtain the calibration certificate for your product at ni.com/calibration.

National Instruments corporate headquarters is located at 11500 North Mopac Expressway, Austin, Texas, 78759-3504. National Instruments also has offices located around the world to help address your support needs. For telephone support in the United States, create your service request at ni.com/support and follow the calling instructions or dial 512 795 8248. For telephone support outside the United States, contact your local branch office:
