APEX WAVES

COMPREHENSIVE SERVICES

We offer competitive repair and calibration services, as well as easily accessible documentation and free downloadable resources.

SELL YOUR SURPLUS

We buy new, used, decommissioned, and surplus parts from every NI series. We work out the best solution to suit your individual needs.

Sell For Cash   Get Credit   Receive a Trade-In Deal

OBSOLETE NI HARDWARE IN STOCK & READY TO SHIP

We stock **New, New Surplus, Refurbished,** and **Reconditioned** NI Hardware.

Bridging the gap between the manufacturer and your legacy test system.

SPECIFICATIONS

PXI-6542

100 MHz, 32-Channel, 5 V PXI Digital Waveform Instrument

These specifications apply to the PXI-6542 with 1 MBit, 8 MBit, and 64 MBit of memory per channel.

Hot Surface If the PXI-6542 has been in use, it may exceed safe handling temperatures and cause burns. Allow the PXI-6542 to cool before removing it from the chassis.

Note All values were obtained using a 1 m cable (SHC68-C68-D4 recommended). Performance specifications are not guaranteed when using longer cables.

NATIONAL INSTRUMENTS™

Definitions

Warranted specifications describe the performance of a model under stated operating conditions and are covered by the model warranty.

The following characteristic specifications describe values that are relevant to the use of the model under stated operating conditions but are not covered by the model warranty.

* *Typical* specifications describe the performance met by a majority of models.
* *Nominal* specifications describe an attribute that is based on design, conformance testing, or supplemental testing.

Specifications are *Typical* unless otherwise noted.

Conditions

Typical values are representative of an average unit operating at room temperature.

Channels

Data	
Number of channels	32
Direction control	Per channel
Programmable Function Interface (PFI)	
Number of channels	4
Direction control	Per channel
Clock terminals

[1] For module assemblies C and later. Module assemblies A and B have an input impedance of 10 kΩ.

Table 2. Voltage Levels

Logic family	Maximum Low Threshold	Minimum High Threshold
1.8 V	0.45 V	1.35 V
2.5 V	0.75 V	1.75 V
3.3 V TTL (5 V TTL compatible)	1.00 V	2.30 V

Input impedance[2]	50 kΩ
Input protection range[3]	-1 V to 6 V

Timing

Sample Clock

Sources	1. On Board clock (internal voltage-controlled crystal oscillator [VCXO] with divider) 2. CLK IN (SMB connector) 3. PXI_STAR (PXI backplane) 4. STROBE (Digital Data & Control [DDC] connector; acquisition only)
Frequency range	
On Board clock	48 Hz to 100 MHz Configurable to 200 MHz/N $2 \le N \le 4{,}194{,}304$
CLK IN	20 kHz to 100 MHz
PXI_STAR	48 Hz to 100 MHz
STROBE	48 Hz to 100 MHz
Relative delay adjustment	
Range	0.0 to 1.0 Sample clock periods
Resolution	10 ps
Exported Sample Clock	
Destinations[5]	1. DDC CLK OUT (DDC connector) 2. CLK OUT (SMB jack connector)

---

[2] For module assemblies C and later. Module assemblies A and B have an input impedance of 10 kΩ.
[3] Diode clamps in the design may provide additional protection outside the specified range.
[4] You can apply a delay or phase adjustment to the On Board clock to align multiple devices.
[5] Sample clocks with sources other than STROBE can be exported.

Delay (δ_C), for clock frequencies ≥25 MHz	
Range	0.0 to 1.0 Sample clock periods
Resolution	1/256 of Sample clock period
Jitter, using On Board clock	
Period	20 ps_{rms}, typical
Cycle-to-cycle	35 ps_{rms}, typical

Generation Timing

Channels	Data DDC CLK OUT PFI <0..3>
Data channel-to-channel skew	±600 ps, typical
Maximum data channel toggle rate	50 MHz
Data position modes	Sample clock rising edge Sample clock falling edge Delay from Sample clock rising edge
Generation data delay (δ_G), for clock frequencies ≥25 MHz	
Range	0.0 to 1.0 Sample clock periods
Resolution	1/256 of Sample clock period
Exported Sample clock offset (t_{CO})	Software-selectable: 0.0 ns or 2.5 ns (default)
Time delay from Sample clock (internal) to DDC connector (t_{SCDDC})	15 ns, typical

Table 3. Generation Provided Setup and Hold Times

Exported Sample Clock Mode and Offset	Voltage Family	Time from Rising Clock Edge to Data Transition (t_{PCO})	Minimum Provided Setup Time (t_{PSU})	Minimum Provided Hold Time (t_{PH})
Noninverted, 2.5 ns	1.8 V	2.5 ns, typical	t_P - 5.5 ns	0.5 ns
	2.5 V		t_P - 4.5 ns	0.9 ns
	3.3 V/5.0 V		t_P - 4.5 ns	1 ns

Table 3. Generation Provided Setup and Hold Times (Continued)

| Exported Sample Clock Mode and Offset	Voltage Family	Time from Rising Clock Edge to Data Transition (t_{PCO})	Minimum Provided Setup Time (t_{PSU})	Minimum Provided Hold Time (t_{PH})
Inverted, 0 ns	1.8 V	$t_P/2$	$t_P/2$ - 3.5 ns	$(t_P/2)$ - 1.5 ns
	2.5 V		$t_P/2$ - 2.5 ns	
	3.3 V/5.0 V		$t_P/2$ - 2 ns	

> **Note** Provided setup and hold times account for maximum channel-to-channel skew and jitter.

The table values provided assume the following data position is set to Sample clock rising edge and the Sample clock is exported to the DDC connector and includes worst-case effects of channel-to-channel skew, inter-symbol interference, and jitter. Other combinations of exported Sample clock mode and offset are also allowed. The values presented are from the default case (noninverted clock with 2.5 s offset) and for providing balanced setup and hold times (inverted clock with 0 ns offset).

To determine the appropriate exported Sample clock mode and offset for your PXI-6542 generation session, compare the setup and hold times from the datasheet of your device under test (DUT) to the values in this table. Select the exported Sample clock mode and offset such that the PXI-6542 provided setup and hold times are greater than the setup and hold times required for the DUT.

Specified timing relationships apply at the DDC connector and at high-speed DIO accessory terminals. Any signal routing, clock splitting, buffers, or translation logic can impact this relationship. If multiple copies of DDC_CLK_OUT are necessary, use a zero buffer to preserve this relationship.

Figure 1. Generation Provided Setup and Hold Times Timing Diagram

$t_P = \dfrac{1}{f}$ = Sample Clock Period

t_{PH} = Minimum Provided Hold Time

t_{PSU} = Minimum Provided Set-Up Time

t_{PCO} = Time from Rising Clock Edge to Data Transition (Provided Clock to Out Time)
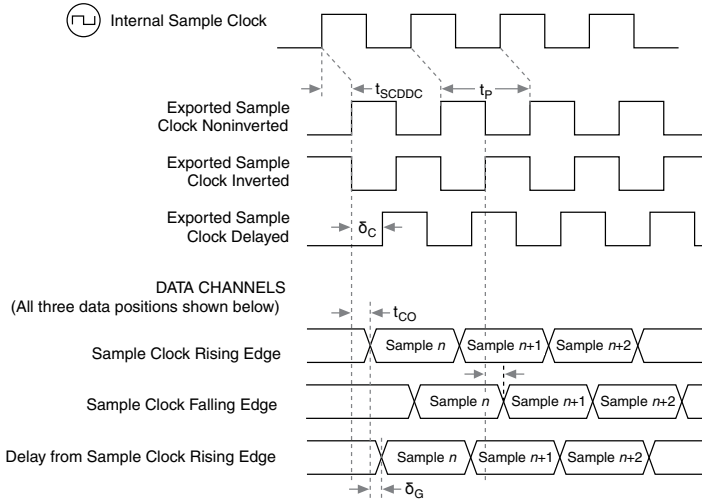

t_{CO} = Exported Sample Clock Offset

t_{SKEW} = Maximum Channel-to-Channel Skew and Clock Uncertainty

Note Provided setup and hold times account for maximum channel-to-channel skew and jitter.

Figure 2. Generation Timing Diagram

t_{SCDDC} : Time Delay from Internal Sample Clock to DDC Connector Exported Sample Clock

$0 \leq \delta_C \leq 1$: Exported Sample Clock Delay (fraction of t_P)

$0 \leq \delta_G \leq 1$: Generation Data Delay (fraction of t_P)

$t_P = \dfrac{1}{f}$ = Sample Clock Period

t_{CO} = Exported Sample Clock Offset; 0 or 2.5 ns, software-selectable

Acquisition Timing

| Channels	Data STROBE PFI <0..3>
Channel-to-channel skew	±600 ps, typical
Data position modes	Sample clock rising edge Sample clock falling edge Delay from Sample clock rising edge
Setup and hold times	
To STROBE[6]	
Setup time (t_{SUS})	3.1 ns, maximum
Hold time (t_{HS})	2.7 ns, maximum

---

[6] Includes maximum data channel-to-channel skew.
To Sample clock[7]

Setup time (t_{SUSC})	0.4 ns
Hold time (t_{HSC})	0 ns
Time delay from DDC connector data to internal Sample clock (t_{DDCSC})	10 ns, typical

Acquisition data delay (δ_A), for clock frequencies ≥25 MHz

Range	0.0 to 1.0 Sample clock periods
Resolution	1/256 of Sample clock period

Figure 3. Acquisition Timing Diagram Using STROBE as the Sample Clock

t_{SUS} = Set-Up Time to STROBE

t_{HS} = Hold Time from STROBE

$0 \leq \delta_A \leq 1$: Acquisition Data Delay (fraction of t_P)

$t_P = \dfrac{1}{f}$ = Sample Clock Period

---

[7] Does not include data channel-to-channel skew, t_{DDCSC}, or t_{SCDDC}.

$t_P = \dfrac{1}{f}$ = Period of Sample Clock

t_{SUSC} = Set-Up Time to Sample Clock

t_{HSC} = Hold Time to Sample Clock

CLK IN

Connector	SMB jack
Direction	Input
Signal type	Single-ended
Destinations	1. Reference clock for the phase-locked loop (PLL) 2. Sample clock
Input coupling	AC
Input protection	±10 VDC
Input impedance	Software-selectable: 50 Ω (default) or 1 kΩ

Minimum detectable pulse width	4 ns
Clock requirements	Free-running (continuous) clock

As Sample Clock

Table 4. External Sample Clock Range

Voltage Range (V$_{pk-pk}$)	Sine Wave Frequency Range	Square Wave	
		Frequency Range	Duty Cycle
0.65 to 5.0	5.5 MHz to 100 MHz	20 kHz to 100 MHz	f <50 MHz: 25% to 75% f ≥50 MHz: 40% to 60%
1.0 to 5.0	3.5 MHz to 100 MHz	—	—
2.0 to 5.0	1.8 MHz to 100 MHz	—	—

As Reference Clock

Frequency range	10 MHz ±50 ppm
Voltage range	0.65 V$_{pk-pk}$ to 5.0 V$_{pk-pk}$
Duty cycle	25% to 75%

STROBE

Connector	DDC
Direction	Input
Destination	Sample clock (acquisition only)
Frequency range	48 Hz to 100 MHz
Duty cycle range[8]	
f <50 MHz	25% to 75%
f ≥50 MHz	40% to 60%
Minimum detectable pulse width[9]	4 ns
Voltage thresholds	Refer to *Acquisition Timing* in the *Timing* section.

---

[8] At the programmed thresholds.
[9] Required at both acquisition voltage thresholds.

Clock requirements	Free-running (continuous) clock
Input impedance[10]	Software-selectable: 50 kΩ

PXI_STAR

Connector	PXI backplane
Direction	Input
Signal type	Single-ended
Destinations	1. Sample clock
	2. Start trigger
	3. Reference trigger (acquisition sessions only)
	4. Advance trigger (acquisition sessions only)
	5. Pause trigger (generation sessions only)
	6. Script trigger <0..3> (generation sessions only)
Frequency range	48 Hz to 100 MHz
Clock requirements	Free-running (continuous) clock

CLK OUT

Connector	SMB jack
Direction	Output
Sources	1. Sample clock (excluding STROBE)
	2. Reference clock (PLL)
Output impedance	50 Ω, nominal
Electrical characteristics	Refer to *Generation Timing* in the *Timing* section.
Maximum drive current	
At 1.8 V	8 mA
At 2.5 V	16 mA
At 3.3 V	32 mA
Logic type	Generation logic family setting: 1.8 V, 2.5 V, 3.3 V

DDC CLK OUT

Connector	DDC
Direction	Output

---

[10] For module assemblies C and later. Module assemblies A and B have an input impedance of 10 kΩ.

Source[11]	Sample clock
Electrical characteristics	Refer to *Generation Timing* in the *Timing* section.

Reference Clock (PLL)

Sources[12]	1. PXI_CLOCK10, (PXI backplane) 2. CLK IN (SMB jack connector) 3. None (On Board clock not locked to a reference)
Destination	CLK OUT (SMB jack connector)
Lock time	400 ms, typical
Frequencies	10 MHz ±50 ppm
Duty cycle range	25% to 75%

Waveform

Memory and Scripting

Memory architecture	The PXI-6542 uses Synchronization and Memory Core (SMC) technology in which waveforms and instructions share onboard memory. Parameters such as number of script instructions, maximum number of script instructions, maximum number of waveforms in memory, and number of samples (S) available for waveform storage are flexible and user defined.
Onboard memory size[13]	
1 Mbit/channel	
Acquisition	1 Mbit/channel (4 MBytes total)
Generation	1 Mbit/channel (4 MBytes total)
8 Mbit/channel	
Acquisition	8 Mbit/channel (32 MBytes total)
Generation	8 Mbit/channel (32 MBytes total)

---

[11] STROBE cannot be routed to DDC CLK OUT.
[12] The source provides the reference frequency for the PLL.
[13] Maximum limit for generation sessions assumes no scripting instructions.

64 Mbit/channel

Acquisition	64 Mbit/channel (256 MBytes total)
Generation	64 Mbit/channel (256 MBytes total)

Generation

Single waveform mode	Generates a single waveform once, *n* times, or continuously.
Scripted mode[14]	Generates a simple or complex sequence of waveforms.
Finite repeat count	1 to 16,777,216
Waveform quantum	Waveform must be an integer multiple of 2 S (samples).[15]

Table 5. Generation Minimum Waveform Size, Samples (S)[16]

Configuration	Sample Rate	
	100 MHz	50 MHz
Single waveform	2 S	2 S
Continuous waveform	32 S	16 S
Stepped sequence	128 S	64 S
Burst sequence	512 S	256 S

Acquisition

Minimum record size[17]	1 S
Record quantum	1 record
Total records	2,147,483,647, maximum
Total pre-Reference trigger samples	0 up to full record
Total post-Reference trigger samples	0 up to full record

---

14 Use scripts to describe the waveforms to be generated, the order in which the waveforms are generated, how many times the waveforms are generated, and how the device responds to Script triggers.
15 Regardless of waveform size, NI-HSDIO allocates waveforms into block sizes of 32 S of physical memory.
16 Sample rate dependent. Increasing sample rate increases minimum waveform size.
17 Regardless of waveform size, NI-HSDIO allocates at least 128 bytes for a record.

Triggers

Trigger Types	Sessions	Edge Detection	Level Detection
1. Start	Acquisition and generation	Rising or falling	—
2. Pause	Acquisition and generation	—	High or low
3. Script <0..3>	Generation	Rising or falling	High or low
4. Reference	Acquisition	Rising or falling	—
5. Advance	Acquisition	Rising or falling	—

Sources	1. PFI 0 (SMB jack connector)
	2. PFI <1..3> (DDC connector)
	3. PXI_TRIG <0..7> (PXI backplane)
	4. PXI_STAR (PXI backplane)
	5. Pattern match (acquisition sessions only)
	6. Software (user function call)
	7. Disabled (do not wait for a trigger)
Destinations[18]	PFI 0 (SMB jack connector)
	PFI <1..3> (DDC connector)
	PXI_TRIG <0..6> (PXI backplane)
Minimum required trigger pulse width	
Generation	30 ns
Acquisition	Acquisition triggers must meet setup and hold time requirements.

---

[18] Each trigger can be routed to any destination except the Pause trigger. The Pause trigger cannot be exported for acquisition sessions.

Table 6. Trigger Rearm Time

Type	Typical	Maximum
Start to Reference	57 S	64 S
Start to Advance	138 S	143 S
Reference to Reference	132 S	153 S

Delay from Pause trigger to Pause state[19]	
Generation sessions	32 Sample clock periods + 150 ns
Acquisition sessions	Data synchronous
Delay from trigger to digital data output	32 Sample clock periods + 160 ns

Events

Event Types	Sessions
1. Marker <0..3>	Generation
2. Data Active	Generation
3. Ready for Start	Acquisition and generation
4. Ready for Advance	Acquisition
5. End of Record	Acquisition

Destinations[20]	1. PFI 0 (SMB jack connector) 2. PFI <1..3> (DDC connector) 3. PXI_TRIG <0..6> (PXI backplane)
Marker time resolution (placement)	Markers must be placed at an integer multiple of 2 S (samples).

---

[19] Use the Data Active event during generation to determine when the PXI-6542 enters the Pause state.

[20] Except for the Data Active event, each event can be routed to any destination. The Data Active event can be routed only to the PFI channels.

Miscellaneous

Warm-up time	15 minutes
On Board clock characteristics (valid only when PLL reference source is set to None)	
Frequency accuracy	±100 ppm
Temperature stability	±30 ppm
Aging	±5 ppm first year

Software

Driver Software

Driver support for this device was first available in NI-HSDIO 1.2.

NI-HSDIO is an IVI-compliant driver that allows you to configure, control, and calibrate the PXI-6542. NI-HSDIO provides application programming interfaces for many development environments.

Application Software

NI-HSDIO provides programming interfaces, documentation, and examples for the following application development environments:

- LabVIEW
- LabWindows™/CVI™
- Measurement Studio
- Microsoft Visual C/C++
- .NET (C# and VB.NET)

NI Measurement Automation Explorer

NI Measurement Automation Explorer (MAX) provides interactive configuration and test tools for the PXI-6542. MAX is included on the NI-HSDIO media.

Power

VDC	Current Draw, Typical	Current Draw, Maximum
+3.3 V	1.6 A	1.8 A
+5 V	1.2 A	1.7 A

VDC	Current Draw, Typical	Current Draw, Maximum
+12 V	0.25 A	0.4 A
-12 V	0.06 A	0.10 A

Total power   15 W, typical
                                               20.5 W, maximum

Physical Specifications

Dimensions   Single 3U, CompactPCI slot, PXI compatible,
                                               21.6 cm × 2.0 cm × 13.1 cm

Weight   343 g (12.1 oz)

I/O Connectors

Label	Connector Type	Description
CLK IN		External Sample clock, external PLL reference input
PFI 0	SMB jack	Events, triggers
CLK OUT		Exported Sample clock, exported Reference clock
DIGITAL DATA & CONTROL	68-pin VHDCI connector	Digital data channels, exported Sample clock, STROBE, events, triggers

Environment

> **Note** To ensure that the PXI-6542 cools effectively, follow the guidelines in the *Maintain Forced Air Cooling Note to Users* included with the PXI-6542 or available at *ni.com/manuals*. The PXI-6542 is intended for indoor use only.

Operating temperature   0 °C to 55 °C in all NI PXI chassis except the
                                               following: 0 °C to 45 °C when installed in an
                                               NI PXI-1000B or NI PXI-101x chassis

Operating relative humidity   10 to 90% relative humidity, noncondensing
                                               (meets IEC 60068-2-56)

Storage temperature   -20 °C to 70 °C

Storage relative humidity	5 to 95% relative humidity, noncondensing (meets IEC 60068-2-56)
Operating shock	30 g, half-sine, 11 ms pulse (meets IEC 60068-2-27; test profile developed in accordance with MIL-PRF-28800F)
Operating vibration	5 Hz to 500 Hz, 0.31 g_{rms} (meets IEC 60068-2-64)
Storage shock	50 g, half-sine, 11 ms pulse (meets IEC 60068-2-27; test profile developed in accordance with MIL-PRF-28800F)
Storage vibration	5 Hz to 500 Hz, 2.46 g_{rms} (meets IEC 60068-2-64; test profile exceeds requirements of MIL-PRF-28800F, Class B)
Altitude	0 to 2,000 m above sea level (at 25 °C ambient temperature)
Pollution degree	2

Compliance and Certifications

Safety

This product is designed to meet the requirements of the following electrical equipment safety standards for measurement, control, and laboratory use:

- IEC 61010-1, EN 61010-1
- UL 61010-1, CSA C22.2 No. 61010-1

Note For UL and other safety certifications, refer to the product label or the *Online Product Certification* section.

Electromagnetic Compatibility

This product meets the requirements of the following EMC standards for electrical equipment for measurement, control, and laboratory use:

- EN 61326-1 (IEC 61326-1): Class A emissions; Basic immunity
- EN 55011 (CISPR 11): Group 1, Class A emissions
- AS/NZS CISPR 11: Group 1, Class A emissions
- FCC 47 CFR Part 15B: Class A emissions
- ICES-001: Class A emissions

Note For EMC declarations, certifications, and additional information, refer to the *Online Product Certification* section.

To meet EMC compliance, the following cautions apply:

⚠ **Caution** The SHC68-C68-D4 shielded cables must be used when operating the PXI-6542.

⚠ **Caution** EMC filler panels must be installed in all empty chassis slots.

CE Compliance $\mathsf{C}\mathsf{E}$

This product meets the essential requirements of applicable European Directives, as follows:

- 2014/35/EU; Low-Voltage Directive (safety)
- 2014/30/EU; Electromagnetic Compatibility Directive (EMC)

Online Product Certification

Refer to the product Declaration of Conformity (DoC) for additional regulatory compliance information. To obtain product certifications and the DoC for this product, visit *ni.com/certification*, search by model number or product line, and click the appropriate link in the Certification column.

Environmental Management

NI is committed to designing and manufacturing products in an environmentally responsible manner. NI recognizes that eliminating certain hazardous substances from our products is beneficial to the environment and to NI customers.

For additional environmental information, refer to the *Minimize Our Environmental Impact* web page at *ni.com/environment*. This page contains the environmental regulations and directives with which NI complies, as well as other environmental information not included in this document.

Waste Electrical and Electronic Equipment (WEEE)

🗑 **EU Customers** At the end of the product life cycle, all NI products must be disposed of according to local laws and regulations. For more information about how to recycle NI products in your region, visit *ni.com/environment/weee*.

电子信息产品污染控制管理办法（中国 RoHS）

♻ ⑳ **中国客户** National Instruments 符合中国电子信息产品中限制使用某些有害物质指令（RoHS）。关于 National Instruments 中国 RoHS 合规性信息，请登录 ni.com/environment/rohs_china。（For information about China RoHS compliance, go to ni.com/environment/rohs_china.）
