## About These Specifications

---

*Specifications* characterize the warranted performance of the instrument under the following operating conditions:

- Chassis is powered on
- Calibration adjustment cycle maintained
- 50 Ω termination connected to unused I/O front panel connectors

*Typical Specifications* are specifications met by the majority of the instrument under the stated operating conditions and are tested at 23 °C ambient temperature. Typical specifications are not warranted.

Nominal values (or supplemental information) describe additional information about the product that may be useful, including expected performance that is not covered under *Typical Specifications*. Nominal values are not covered by warranty.

All voltages are specified in DC, AC<sub>pk</sub>, or a combination unless otherwise specified.

Clean devices and terminal blocks by brushing off light dust with a soft, nonmetallic brush. Remove other contaminants with a soft, lint-free, dampened cloth. Do not use detergent or chemical solvents. The unit must be completely dry and free from contaminants before returning to service.

### Third-order intermodulation distortion (Input IP3 (IIP3))

Typical IP3 (input)  $\gt +56$  dBm

**Note** Measurements performed with two 10 dBm input tones = 1 MHz apart. This specification is based on both experimental and calculated data.

## Dynamic Characteristics
