PXIe-2575 Topology

Each topology supports immediate and scanning operations.

1-Wire 196×1 Multiplexer

Software name: 2575/1-Wire 196x1 Mux
(NISWITCH_TOPOLOGY_2575_1_WIRE_196X1_MUX)

2-Wire 95×1 Multiplexer

Software name: 2575/2-Wire 95x1 Mux
(NISWITCH_TOPOLOGY_2575_2_WIRE_95X1_MUX)

2-Wire 98×1 Multiplexer

Software name: 2575/2-Wire 98x1 Mux
(NISWITCH_TOPOLOGY_2575_2_WIRE_98X1_MUX)

Making a Connection

You can control the channels using the niSwitch Connect Channels VI or the `niSwitch_Connect` function.

For example, to close the relay of channel 1, call `niSwitch_Connect(vi, "ch1", "com")`. To open the relay of channel 1, call `niSwitch_Disconnect(vi, "ch1", "com")`.

When scanning the module, a typical scan list entry could be `ch1->com;`. This entry closes the relay between CH1 and COM.

PXIe-2575 Relay Replacement

The module uses electromechanical armature relays.

Replacement Relay	Part Number
OMRON	G6KU-2F-Y
Tyco	5-1462039-7
National Instruments (10 relays, OMRON)	780386-01
National Instruments (10 relays, Tyco)	782051-01

Disassemble the Module

1. Ground yourself using a grounding strap or a ground connected to your PXI chassis.

**Note** Properly grounding yourself prevents damage to your module from electrostatic discharge.

2. Locate the relay you want to replace. Refer to the following figures and table for relay locations.

Figure 1. Base Board

Figure 2. Mezzanine Board

1-Wire 196×1 Channel Name		2-Wire 95×1 Channel Name	2-Wire 98×1 Channel Name	Software Relay Name	Reference Designator (Base Board 191700D and earlier)

COM Relay				k15	K15 (base board)

3. Remove the four screws and washers that secure the mezzanine board to the base

board. Do not remove the hex standoffs or the base board.

Note Older versions might have adhesive plastic lead covers that you must remove. The module retains full specifications even if these covers are not reinstalled.

- Disassembly of Base Board 191700C and Earlier: remove the four screws and washers that secure the mezzanine board to the base board. Do not remove the hex standoffs or the base board. .

Figure 3. Base Board Disassembly

- | | |
|----------------------------|----------------|
| 1 Screws | 4 Hex Standoff |
| 2 Washers | 5 Base board |
| 3 Lead covers (if present) | |

- Separate the mezzanine board from the base board.
- Locate the assembly and serial number labels on the board with the relay you want to replace. White labels indicate the board was assembled using lead solder (Sn 63 Pb 37). Green labels indicate the board was assembled using lead-free solder (Sn 96.5 Ag 3.0 Cu 0.5). Lead-free assemblies have assembly numbers ending in L.

Replace the Relay

Ensure you have the following:

- Temperature-regulated soldering iron
 - Set to 371 °C (700 °F) for lead-free solder rework
 - Set to 316 °C (600 °F) for lead solder rework
- Solder
 - 96.5/3.0/0.5 Tin/Silver/Copper solder (flux core) for lead-free solder rework
 - 63/37 Tin/Lead solder (flux core) for lead solder rework
- Solder wick
- Fine pick
- Isopropyl alcohol
- Cotton swabs

Note NI recommends using lead-free solder for relay replacement on lead-free assemblies, and lead solder for relay replacement on lead assemblies.

Notice Do not rework lead assemblies using a lead-free work station. Lead solder from the unit could contaminate the station.

Notice If a lead-free assembly is reworked with lead solder, label the assembly to indicate this. This can prevent the same unit from being reworked later on a lead-free solder station, which could contaminate the station.

If you have a surface mount rework station, replace the relay as you would any other surface mount part. Otherwise, complete the following steps to replace the relay:

1. Use the soldering iron and solder wick to remove as much solder from the relay pads as possible. Do not leave the soldering iron on any lead for more than 5 seconds.

Note If it is necessary to reapply the soldering iron to the pad, allow the connection to cool completely before reapplying the soldering iron.

2. Apply heat to the pads one at a time, and use the pick to gently pry the relay pins from the pads. Make sure that the solder is molten before prying.

Notice Using excessive force on a soldered pad can result in lifting the PCB trace and ruining the board.

3. Remove the relay.
4. Clean the pads with isopropyl alcohol and cotton swabs.
5. Place the new relay on the PCB pads and solder.
6. Remove the excess flux with isopropyl alcohol and cotton swabs.

Notice Do not use flux remover to clean the board after relay replacement.

Reassemble the Module

Complete the ***Disassemble the Module*** steps in reverse order to reassemble your module.

Tip To reset the relay count after replacing a failed relay, refer to ***Resetting a Relay Count*** in the ***NI-SWITCH Switch Soft Front Panel User Manual***.
