SPECIFICATIONS

PXIe-5673E

Vector Signal Generator

These specifications apply to the PXIe-5673E with up to 6.6 GHz frequency and up to 512 MB onboard memory.

The PXIe-5673E comprises the following modules:

- PXIe-5611 IQ Modulator
- PXIe-5450/5451 Waveform Generator
- PXIe-5650/5651/5652 RF Analog Signal Generator (LO source)

There is no physical device named "PXIe-5673E."

Definitions

Warranted specifications describe the performance of a model under stated operating conditions and are covered by the model warranty.

The following characteristic specifications describe values that are relevant to the use of the model under stated operating conditions but are not covered by the model warranty.

- *Typical* specifications describe the performance met by a majority of models.
- *Nominal* specifications describe an attribute that is based on design, conformance testing, or supplemental testing.

Specifications are *Warranted* unless otherwise noted.

Conditions

Warranted specifications are valid under the following conditions unless otherwise noted.

- Over ambient temperature ranges of 0 °C to 55 °C
- 30 minutes warm-up time
- Calibration adjustment cycle maintained
- Chassis fan speed set to High

- NI-RFSG instrument driver self-calibration performed after instrument temperature is stable
- 50 Ω terminator connected to the LO OUT front panel connector
- PXIe-5650/5651/5652 onboard Reference Clock used as the PXIe-5673E Reference Clock
- PXIe-5650/5651/5652 in low loop bandwidth mode unless otherwise noted
- Most current product revision

Typical specifications are valid under the following condition unless otherwise noted.

- Over ambient temperature ranges of 23 °C ± 5 °C

50 MHz to 6.6 GHz	781263-0x

Note PXIe-5673E part numbers vary according to memory size.

Bandwidth

Modulation bandwidth[1] (3 dB double sideband)	>100 MHz

In the following three figures, measured modulation bandwidths show the actual baseband response. The usable bandwidth is limited by the PXIe-5450/5451 I/Q generator sample rate from -80 MHz to 80 MHz. The shaded area between the solid lines indicates the frequency range covered by this specification.

[1] The modulation bandwidth specification assumes the frequency range is between 85 MHz and 6.6 GHz. For example, 100 MHz bandwidth can be achieved at a frequency of 135 MHz but not 85 MHz.

Frequency Settling Time[2,3]

Table 2. Low Loop Bandwidth

Frequency Settling Time	Median Tuning Speed (ms)	Maximum Tuning Speed (ms)
≤0.1×10^{-6} of final frequency	1.5	6.5
≤0.01×10^{-6} of final frequency	6.5	13

[2] The frequency settling time specification only includes frequency settling, and it excludes any residual amplitude settling that may occur as a result of large frequency changes. Driver and operating system timing can affect transition times. This specification applies when using RF list mode.

[3] Frequency steps that span the full range of a voltage-controlled oscillator (VCO) require more settling time than steps that remain close together within one VCO or steps that switch between VCOs. The maximum specification covers this worst-case frequency settling time.

Table 3. High Loop Bandwidth

Frequency Settling Time	Median Tuning Speed (ms)	Maximum Tuning Speed (ms)

Spurious Responses

Harmonics

Harmonics in the following table were measured using a 1 MHz baseband signal. The following specification includes all harmonic levels. Below 100 MHz, harmonic levels are nominally -11 dBc.

Table 5. Harmonics

Carrier Frequency	Specification (dBc)	Typical (dBc)

Note Subharmonic and non-integer harmonic levels outside the device frequency range are typical.

Baseband Feedthrough

The measurement noise floor in the following figure is at -75 dBc. For example, with a baseband frequency of 10 MHz at an RF carrier frequency of 2 GHz, a 10 MHz signal is also present at the RF output at a level of -69 dBc.

[4] Subharmonics are 0.5× the output frequency.
[5] Non-integer harmonics are 1.5× the output frequency.

[6] Assumptions include using an Internal Sample Clock and High Resolution onboard Sample Clock mode. Desired sample rate ranges do not include the first point. A desired sample rate of 50 MS/s yields 8× total interpolation.

[7] If your interpolated sample rate falls within an undesirable band, use the Modulation Toolkit to provide fractional resampling that adjusts the sample rate to achieve better rejection.

[8] Calculated from sync response and typical filter rejection for the PXIe-5450/5451. Refer to the *PXIe-5450 Specifications* or *PXIe-5451 Specifications* for more information about the expected performance of the PXIe-5450/5451.

Typical Modulation Spectrum

The following four figures indicate the achievable performance when you reduce the baseband power using prefilter gain.

The specifications in the following four figures were measured under the following conditions:

- Modulation: QPSK
- Symbol rate: 3.84 MS/s
- Filter: root raised cosine with alpha value of 0.22
- Filter length: 128 symbols
- RF power: set to -10 dBm
- Prefilter gain: set to -5 dB
- Number of averages by receiver: 100
- Noise cancellation: On

[6] Assumptions include using an Internal Sample Clock and High Resolution onboard Sample Clock mode. Desired sample rate ranges do not include the first point. A desired sample rate of 50 MS/s yields 8× total interpolation.

[7] If your interpolated sample rate falls within an undesirable band, use the Modulation Toolkit to provide fractional resampling that adjusts the sample rate to achieve better rejection.

[8] Calculated from sync response and typical filter rejection for the PXIe-5450/5451. Refer to the *PXIe-5450 Specifications* or *PXIe-5451 Specifications* for more information about the expected performance of the PXIe-5450/5451.

+12.0	1.0	0.8

Note Power is 12.6 W, typical.

Environment

Maximum altitude	2,000 m (800 mbar) (at 25 °C ambient temperature)
Pollution Degree	2

Indoor use only.

Operating Environment

Ambient temperature range	0 °C to 55 °C (Tested in accordance with IEC 60068-2-1 and IEC 60068-2-2. Meets MIL-PRF-28800F Class 3 low temperature limit and MIL-PRF-28800F Class 2 high temperature limit.)
Relative humidity range	10% to 90%, noncondensing (Tested in accordance with IEC 60068-2-56.)

Storage Environment

Ambient temperature range	-40 °C to 71 °C (Tested in accordance with IEC 60068-2-1 and IEC 60068-2-2. Meets MIL-PRF-28800F Class 3 limits.)
Relative humidity range	5% to 95%, noncondensing (Tested in accordance with IEC 60068-2-56.)

Shock and Vibration

Operating shock	30 g peak, half-sine, 11 ms pulse (Tested in accordance with IEC 60068-2-27. Meets MIL-PRF-28800F Class 2 limits.)
Random vibration	
Operating	5 Hz to 500 Hz, 0.3 g_{rms} (Tested in accordance with IEC 60068-2-64.)
Nonoperating	5 Hz to 500 Hz, 2.4 g_{rms} (Tested in accordance with IEC 60068-2-64. Test profile exceeds the requirements of MIL-PRF-28800F, Class 3.)

Calibration

Recommended calibration interval	
PXIe-5611	1 year
PXIe-5450/5451	1 year
PXIe-5650/5651/5652	1 year

Compliance and Certifications

Safety

This product is designed to meet the requirements of the following electrical equipment safety standards for measurement, control, and laboratory use:

- IEC 61010-1, EN 61010-1
- UL 61010-1, CSA C22.2 No. 61010-1

Note For UL and other safety certifications, refer to the product label or the *Online Product Certification* section.

Electromagnetic Compatibility

This product meets the requirements of the following EMC standards for electrical equipment for measurement, control, and laboratory use:

- EN 61326-1 (IEC 61326-1): Class A emissions; Basic immunity
- EN 55011 (CISPR 11): Group 1, Class A emissions
- EN 55022 (CISPR 22): Class A emissions
- EN 55024 (CISPR 24): Immunity
- AS/NZS CISPR 11: Group 1, Class A emissions
- AS/NZS CISPR 22: Class A emissions
- FCC 47 CFR Part 15B: Class A emissions
- ICES-001: Class A emissions

Note In the United States (per FCC 47 CFR), Class A equipment is intended for use in commercial, light-industrial, and heavy-industrial locations. In Europe, Canada, Australia, and New Zealand (per CISPR 11), Class A equipment is intended for use only in heavy-industrial locations.

Note Group 1 equipment (per CISPR 11) is any industrial, scientific, or medical equipment that does not intentionally generate radio frequency energy for the treatment of material or inspection/analysis purposes.

Note For EMC declarations, certifications, and additional information, refer to the *Online Product Certification* section.

CE Compliance CE

This product meets the essential requirements of applicable European Directives, as follows:

- 2014/35/EU; Low-Voltage Directive (safety)
- 2014/30/EU; Electromagnetic Compatibility Directive (EMC)

Online Product Certification

Refer to the product Declaration of Conformity (DoC) for additional regulatory compliance information. To obtain product certifications and the DoC for this product, visit *ni.com/certification*, search by model number or product line, and click the appropriate link in the Certification column.

Environmental Management

NI is committed to designing and manufacturing products in an environmentally responsible manner. NI recognizes that eliminating certain hazardous substances from our products is beneficial to the environment and to NI customers.
