COMPREHENSIVE SERVICES

We offer competitive repair and calibration services, as well as easily accessible documentation and free downloadable resources.

SELL YOUR SURPLUS

We buy new, used, decommissioned, and surplus parts from every NI series. We work out the best solution to suit your individual needs. We Sell For Cash We Get Credit We Receive a Trade-In Deal

OBSOLETE NI HARDWARE IN STOCK & READY TO SHIP

We stock New, New Surplus, Refurbished, and Reconditioned NI Hardware.

APEX WAVES

Bridging the gap between the manufacturer and your legacy test system.

Manufacturer: National Instruments

Board Assembly Part Numbe	rs (Refer to Procedure 1 for identification procedure):
----------------------------------	--

Part Number and Revision	Description
153100A-01L and Later	NI PXIe-8384, x8 Gen 2 MXI-Express Daisychain Interface
153100A-02L and Later	NI PXIe-8383MC
193970C-01L and Later	NI PXIe-8364
193970C-02L and Later	NI PXIe-8374

Volatile Memory

Target Data	Туре	Size	Battery Backup	User ¹ Accessible	System Accessible	Sanitization Procedure
Global Address Space	PCIe	512 KB	No	No	Yes	Cycle Power
*	Switch					•
Incoming data packets prior to	PCIe	(x8)	No	No	Yes	Cycle Power
routing to Egress Buffer	Switch	4096 B				
	Ingress					
	Buffer					
Outgoing data packets	PCIe	(x8)	No	No	Yes	Cycle Power
	Switch	4096 B				
	Egress					
	Buffer					

Non-Volatile Memory (incl. Media Storage)

			Battery	User	System	Sanitization
Target Data	Туре	Size	Backup	Accessible	Accessible	Procedure
PCIe switch configuration data	EEPROM	4 KB	No	No	Yes	None
Logic supports basic	CPLD	Altera	No	No	Yes	None
functionality		EPM240				
User 1 KB flash memory block	CPLD	Altera	No	No	Yes	None
		EPM240				

¹ Refer to *Terms and Definitions* section for clarification of *User* and *System Accessible*

Procedures

Procedure 1 – Board Assembly Part Number identification:

To determine the Board Assembly Part Number and Revision, refer to the label applied to the surface of your product. The Assembly Part Number should be formatted as "######a-##L".

Terms and Definitions

Cycle Power:

The process of completely removing power from the device and its components and allowing for adequate discharge. This process includes a complete shutdown of the PC and/or chassis containing the device; a reboot is not sufficient for the completion of this process.

Volatile Memory:

Requires power to maintain the stored information. When power is removed from this memory, its contents are lost. This type of memory typically contains application specific data such as capture waveforms.

Non-Volatile Memory:

Power is not required to maintain the stored information. Device retains its contents when power is removed. This type of memory typically contains information necessary to boot, configure, or calibrate the product or may include device power up states.

User Accessible:

The component is read and/or write addressable such that a user can store arbitrary information to the component from the host using a publicly distributed NI tool, such as a Driver API, the System Configuration API, or MAX.

System Accessible:

The component is read and/or write addressable from the host without the need to physically alter the product.

Clearing:

Per *NIST Special Publication 800-88 Revision 1*, "clearing" is a logical technique to sanitize data in all User Accessible storage locations for protection against simple non-invasive data recovery techniques using the same interface available to the user; typically applied through the standard read and write commands to the storage device.

Sanitization:

Per *NIST Special Publication 800-88 Revision 1*, "sanitization" is a process to render access to "Target Data" on the media infeasible for a given level of effort. In this document, clearing is the degree of sanitization described.
